

HGV Modular Platforms

A.V. Access have recognised like many other companies a need to protect their employees from falling from a vehicle whilst loading or unloading takes place.

We have developed our existing modular platform system into a mobile, versatile and cost effective way of protecting employees when working at heights.

- ▶▶ This system assembles in less than 5 minutes.
- ▶▶ Our Modular System enables no more than two people to build a safe platform along any length of vehicle or part of a vehicle bed.
- ▶▶ You simply clip the platforms together and secure them with parking brakes.
- ▶▶ Each Platform is approximately 3½ metres in length and the stairs can be clipped at either end of each platform, also with a moveable end guardrail, making this system the most versatile on the market.
- ▶▶ This system can be designed to suit any environment, from construction sites to you own specific requirements also these are lightweight, easy to manoeuvre yet strong and robust.
